Happy New Year, 2026

As we step into the year 2026, our NGO remains committed to its mission of combating women's cancers and promoting women's health and welfare. The past year ended with a mixed bag of emotions for us, as we celebrated the successes of our initiatives, but also mourned the loss of our beloved cancer survivor, Mama Margaret, who left an indelible mark on our hearts.

Mama Margaret's courage and resilience in the face of adversity continue to inspire us, and we honor her memory by reaffirming our dedication to the fight against women's cancers. We remember her unwavering spirit, her kindness, and her dedication to cancer awareness, and we strive to carry on her legacy through our work.

We are filled with hope and determination; we are committed to expanding our reach, to supporting more women, and to making a greater impact in the lives of those affected by women's cancers. We will continue to provide programs that promote women's health and welfare. Our theme for 2026 is:

***“Empowering Women,
Enhancing Life”***

We invite you to join us on this journey. Together, we can make a difference in the lives of women and families affected by cancer. We can create a world where women have access to the support they need, where they can live with dignity and purpose, and where they can thrive.

**Dr. F. N. Alaribe Nnadozie
(MD. FWHPWI)**

Just a few ways
to reduce your risk of
gynecological cancers
advised
by
the US National
Foundation for
Cancer Research

► Have your Pap test by
age 21.

The Pap test looks for abnormal cell changes in the cervix to detect cervical cancer in its early stages.

► Protect yourself from
Human papilloma
virus (HPV)

Talk to your doctor about getting the HPV test and HPV vaccine. Also, limit your sexual partners and, when you do have sex, use a condom.

► Don't smoke.

Smoking increases the risk of different cancers including cervical, ovarian, vaginal and vulvar cancers.

► Make healthy
choices.

It's important to maintain a healthy weight, be active and eat a healthy diet consisting of fruit, vegetables, lean proteins and whole grains.

► Share your family
history with your
doctor.

Genetic testing is now available to see if you carry a *BRCA1* or *BRCA2* mutation, which could put you in a high-risk category for ovarian and breast cancer. If you carry a genetic mutation associated to Lynch Syndrome, a hereditary condition that increases your risk of colon cancer, ovarian cancer, uterine cancer, etc.

► Contact your doctor
if you notice any of
these symptoms.

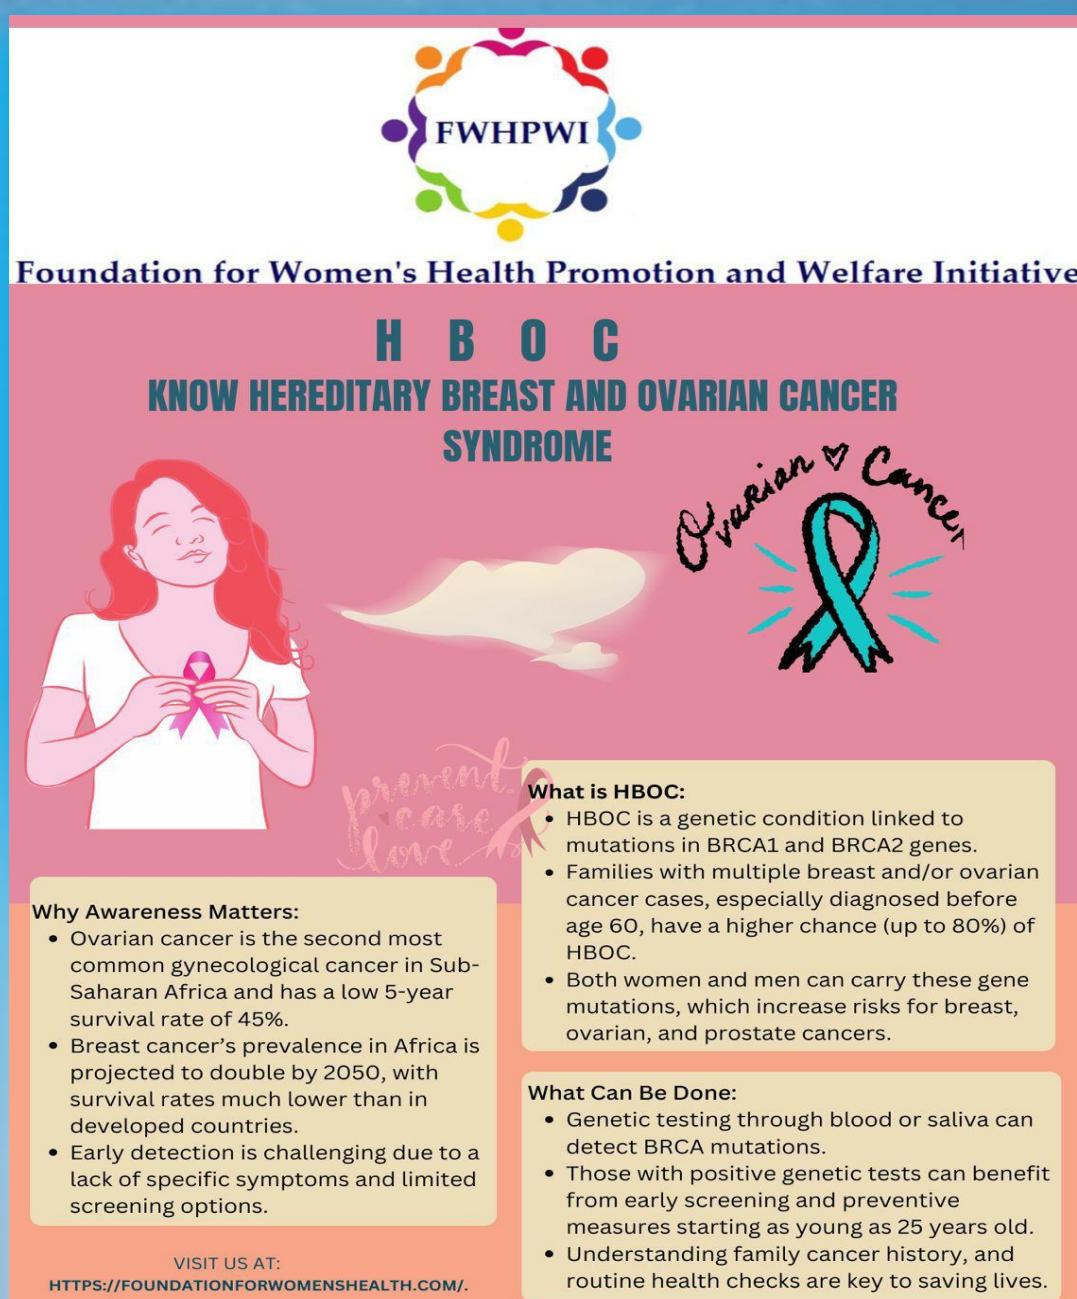

- Abnormal vaginal bleeding or discharge
- Pelvic pain or pressure
- Abdominal or back pain
- Bloating
- Changes in bathroom habits (increased urination, constipation, diarrhea)
- Itching or burning of the vulva
- Changes in vulva color or skin (rash, sores, warts, ulcers).

FWHPWI EVENTS

In October and November, we conducted a series of outreach and fundraising initiatives.

In observance of **Breast Cancer Awareness Month**, we hosted our **Heredity Breast and Ovarian Cancer (HBOC) Week** from October 6 to October 10. During this period, members delivered numerous educational presentations and distributed awareness materials specifically focused on HBOC.

The image is a flyer for HBOC (Heredity Breast and Ovarian Cancer) Awareness. At the top is the logo for the Foundation for Women's Health Promotion and Welfare Initiative (FWHPWI), featuring a circular arrangement of stylized human figures in various colors (orange, red, blue, green, yellow) forming a circle. Below the logo, the text "Foundation for Women's Health Promotion and Welfare Initiative" is written in a blue serif font. The main title "H B O C" is in large, bold, black letters. Below it, the full title "KNOW HEREDITARY BREAST AND OVARIAN CANCER SYNDROME" is written in a smaller, bold, blue font. To the left of the text is a cartoon illustration of a woman with red hair, wearing a white top, holding a pink ribbon. To the right is a teal ribbon with the words "Ovarian Cancer" written in a cursive font. The background of the flyer is pink. In the bottom right corner, there is a yellow box containing text about what HBOC is and what can be done. In the bottom left corner, there is a yellow box containing text about why awareness matters. At the very bottom, there is a line of text that says "VISIT US AT: [HTTPS://FOUNDATIONFORWOMENSHEALTH.COM/](https://FOUNDATIONFORWOMENSHEALTH.COM/).

What is HBOC:

- HBOC is a genetic condition linked to mutations in *BRCA1* and *BRCA2* genes.
- Families with multiple breast and/or ovarian cancer cases, especially diagnosed before age 60, have a higher chance (up to 80%) of HBOC.
- Both women and men can carry these gene mutations, which increase risks for breast, ovarian, and prostate cancers.

What Can Be Done:

- Genetic testing through blood or saliva can detect *BRCA* mutations.
- Those with positive genetic tests can benefit from early screening and preventive measures starting as young as 25 years old.
- Understanding family cancer history, and routine health checks are key to saving lives.

The harm versus benefit argument around cancer treatment is complex and not easily resolved.

But more harmful than any drug is not getting a diagnosis, or one early enough, to give more people the luxury of choice.

Update Gynecologic Malignancies 2025

There have been major changes in the understanding of gynecologic malignancies in recent years, leading to new therapy options and subsequently to greater responsibilities for every professional treating those patients.

The most significant therapeutic advances were achieved with checkpoint inhibitors (CPI), especially for endometrial and cervical cancer.

The COVID-19 pandemic exposed the importance of this practice.

Never
forget the practice!

It is necessary
for your health
now and always.
Do it often.

The best for you is to
keep safe for yourself
and for us all.

While no outreach events were scheduled for November, our foundation held an online general meeting for members on **November 29, 2025**. We subsequently concluded the year with our annual end-of-year function on **December 12, 2025**.

Photos of the events are included below.
